

EPA CERTIFICATION PREPARATION & TESTING

TRAINING DESCRIPTION:

This 1-day seminar is designed to prepare attendees for the EPA Section 608 Universal Certification test. This testing is beneficial for all persons who wish to become certified as Universal technicians in order to maintain, service, or repair both low and high-pressure equipment as well as small appliances. (EPA certification requires the attendee to pass a test administered by the instructor at the end of the seminar. While every attempt is made to provide our attendees with a high quality education, Lewellyn does not guarantee that all attendees will pass this test. It is highly recommended that attendees study on their own in addition to taking these seminars.
